

INTEGRATED ACCESS DEVICES (IADs)

OneAccess

OneAccess, a provider of broadband access solutions for carriers and corporate networks, has expanded its ONE range

product portfolio with the addition of two 'high performance' IADs — the ONE 60 and the ONE 200. Suited for companies migrating to broadband and IP VPNs, the two new IADs — along with the ONE OS software platform available with all OneAccess business gateways — delivers data and/or voice services over leased lines, asymmetrical or symmetrical DSL links. OneAccess has already completed extensive interoperability testing with major DLAM, voice gateway and PBX vendors. Shipping of the two new products is expected by end 1Q 2003.
