

OneAccess is selected by Voice Flex for its data and voice service offer

Paris – 20 December 2006 OneAccess, European leader of Enterprise access routers and professional multiplay devices, today announced a technological business partnership with Voice Flex, a voice and data alternative operator in United Kingdom.

This strategic partnership is strengthening the Voice Flex IP Trunking solution, with deployment of OneAccess ONE100, ONE200 and ONE400 products.

Voice Flex 's UK SME customers will benefit from enhanced professional grade telephony and high speed Internet access.

The ONE100, ONE200 and ONE400 are multi-service routers delivering:

- ADSL2/2+, G.SHDSL, E1/T1 and serial uplinks,
- 4 switch ports,
- up to 8 FXS ports,
- 30 voice channels,
- H.323, SIP and MGCP voice technologies,
- and Wireless options.

Bertrand Meis, OneAccess Networks CEO said: "It's clear that Voice Flex is a good catalyst to highlight our products in United Kingdom. Our multiplatform routers are enabling new types of associated services, which in turn provide a source of new revenues for the operator. At the same time, Voice Flex gives us a valuable opportunity to increase our presence in the United Kingdom and to promote our know-how to other operators".

Paul Taylor, Sales and Marketing Director for Frontier Systems said "We are extremely pleased that our SIP trunk service is fully tested and approved by One Access; I believe the ISDN to SIP converters will have a mass market appeal, allowing traditional TDM telephony systems to support the value added and ROI applications offered by SIP trunking"

ABOUT VOICE FLEX

VoiceFlex, a division of Frontier Systems, was established to provide advanced IP telephony (VoIP) services for UK businesses. Bringing the reliability of the Internet to the telephone, VoiceFlex is an advocate of SIP (Session Initiation Protocol) - the latest technology allowing voice calls to be made over the Internet. VoiceFlex uses its own SIP technology offering developed completely in-house, to provide low cost, ISDN replacement lines that provide the best possible call quality, inexpensively with the flexibility that comes from using the Internet. VoiceFlex can also port any telephone number regardless of geographic location.

ABOUT ONEACCESS

Created in 2001, OneAccess manufactures and markets business-class CPE-routers. OneAccess has built its success by focusing on telecommunication operators' requirements. The OneAccess product range is designed to deliver top-quality IP services, ensuring high security levels, reliability and facilitating integration. The result is improved productivity and reduced Total Cost of Ownership. Since its creation, OneAccess has grown to become a pan-European provider, working with a large number of incumbent (ILEC) and alternative (CLEC) operators.

The OneAccess offer includes the entire broadband access technologies (ADSL/ ADSL2+/SHDSL and SHDSL enhancements), the best in class voice protocols (SIP/H323/MGCP), comprehensive voice - interfaces and an Operating System which is Carrier-Class certified for European Telco's.
