

OneAccess Launches New Generation of ONE Series Multi-Service Access Routers

Press Release

OneAccess Enables new revenues from hosted and cloud-based services; meets service provider demand for increased performance and flexibility in SME and branch office router market.

May 20th 2010, Paris: OneAccess, the European leader in multi-service access routers, has today raised the flexibility, functionality and performance benchmarks of SME and branch office routers with the launch of three new products: ONE50, ONE70 and ONE150. Each product targets specific managed service markets, and features a range of exciting new software options to meet the dynamic service deployment scenarios faced by fixed line operators, mobile operators and ISPs. The three new products incorporate OneAccess' suite of provisioning tools and latest industry-standard CLI, enabling extremely low cost implementation and ongoing support.

"With these products, service providers can maximise new revenue opportunities but also achieve long term cost savings," commented Mike Wilkinson, CMO at OneAccess. "Mining the potential of the SME and branch office market is all about the service provider's ability to deliver a compelling package of ICT services from a single gateway device. Moreover, replacing multiple CPE with a single, flexible unit means reduced capital costs and simpler logistics and operations."

ONE150 – Managed Voice and Data Services for the Small Office

The ONE150 is scaled to provide up to 250 users with analogue, legacy or IP voice, enterprise-class data services, embedded security and high availability over Fibre (Ethernet), VDSL and ADSL2+ access networks. Perfect for operators targeting smaller enterprises or branch offices with a portfolio of managed and value-added services including hosted or cloud-based telephony, the ONE150 features Dial-Tone Continuity®, sophisticated IP QoS and IPVPN as standard. An additional option, Integrated Business Communications (IBC), further boosts the ONE150's exceptional voice agility, and converts it into a fully fledged IP PBX with embedded Unified Communications.

ONE70 – Managed Data Services over Fibre

The ONE70 is optimised for data services over fibre access networks and features a high performance routing engine, sophisticated IP QoS, flexible IP VPNs, in-built stateful firewall and gigabit Ethernet LAN switching as standard. Scaled for mid-sized enterprises with up to 500 users, the ONE70 delivers multiple and concurrent high speed managed data services cost effectively and seamlessly. It enables fixed line operators, mobile operators and ISPs to satisfy the escalating demands of the mid market with innovative, agile, margin-rich data products. The ONE70 can optionally be specified with WiFi connectivity, and even be configured as a public wireless hotspot without any detriment to data security. Various flavours of copper access can be provisioned as an optional second WAN interface for network redundancy.

ONE50 – Managed Data Services for the SME and Branch Office

Offering the scale and flexibility best suited to offices with 250 users or fewer, the ONE50 delivers advanced data services over metro Ethernet, ADSL2+ and VDSL networks. Sporting high performance routing, IP QoS, IPVPNs and in-built stateful firewall functions as standard, the ONE50's 100Mbps metro Ethernet card offers plug-and-go choice of fibre or copper interfaces, and the second network port can be equipped with either an ADSL2+ or an auto-sensing ADSL2+/VDSL2 card for migration scenarios. The ONE50 supports 100Mbps Ethernet LAN switching and can be optionally specified with WiFi. Its dual, high-speed network access capability enables service providers to offer a cost effective high speed back-up and high availability capability to support stringent service level agreements.

About OneAccess

Incorporated in 2001, OneAccess is a leading manufacturer of multi-service routers and carrier Ethernet access devices enabling major telecoms service providers to deliver business-grade managed services profitably. OneAccess supplies routers to over 100 service providers including 4 of the top 5 largest telecoms operators in Europe.

By using mass customisation techniques OneAccess router solutions can be precisely tailored to meet the stringent demands of the business managed services market enabling superior performance, management, reliability and services innovation. For more information please see www.oneaccess-net.com.
